

# CaddyAid features

CaddyAid recommend, that you familiarize yourself with the various settings within the software, so it meets your personal requirements and standard of play.

Note, after the course has been loaded into CaddyAid, before play the **Sirf Star 3 Configuration** must be tested **first** and then the **GPS Receiver**. This only needs to be done once after purchase.

Select course and Play Course

Tools button

To see the menu buttons, simply press the Tools button, and all other buttons will appear. To revert back to the original screen showing no other buttons as here, press the Hide button.

Automated readout

Readouts on the left relate to left hand hazards, the middle to middle hazards and the right readout relates to right hazards.

Ensure you touch the green tick so it has the orange background for GPS to be active

Manual readouts

If you require a manual readout, press the GPS button until the green tick is seen on the white background.

Press the Start button, and select where you want the reading from.

Manual readouts cont.

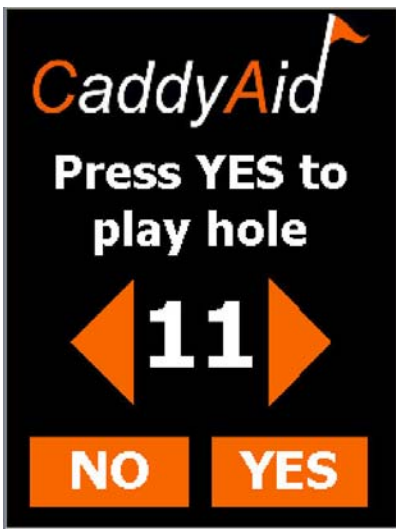

Next press the End button, and again select the position.

The distance between those two manually selected points will be shown

End positions from GPS

When in GPS mode, simply select anywhere on the photograph, and the distance to that point will be shown.

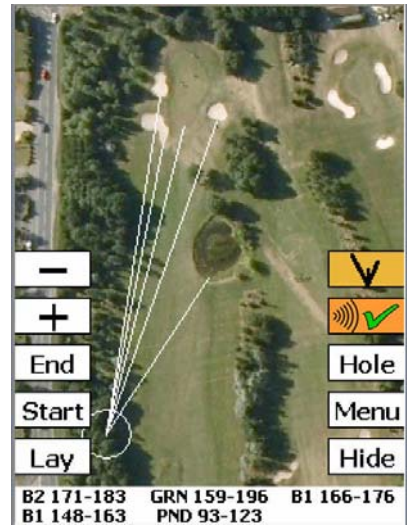

**Change Holes**

To change holes, press the Hole button, and then select the hole of choice by moving forwards or backwards as appropriate. When the correct hole is shown, press the Yes button.

**Lay Up**

Once you have told CaddyAid your preferred Lay Up distance (CaddyAid / Settings / Lay Up) simply press the Lay button, and the distance from where you are standing, to that selected distance will automatically be shown.

**Lines**

To show Lines to all the automated points shown in the readout at the bottom of the screen, simply touch the lines button on and off as required.
